

Anime Industry Analysis Report

Dataset: anime_data_analysis

Project Overview

This project analyzes an anime dataset containing title information, ratings, popularity metrics, studios, release years, seasons, and audience engagement. Data cleaning included duplicate removal, missing value handling, date conversion, and feature engineering for season, release month, and decade.

Data Preparation

- Removed unnecessary column (Unnamed: 3)
- Removed duplicate anime records using mal_id
- Filled missing title_english values with title
- Converted aired_from to datetime
- Derived year from aired_from where possible
- Created season, release_month, and decade features

Chart Analysis

Anime Type Distribution

TV series are expected to dominate the dataset, followed by movies, OVAs, ONAs, and specials. This highlights TV as the primary anime delivery format.

Source Material Distribution

Most anime adaptations originate from manga, novels, light novels, games, or original productions. The chart identifies the strongest content pipelines in the industry.

Rating Distribution

The rating chart reveals the target audience composition, showing whether anime is primarily family-friendly, teen-oriented, or mature.

Anime Releases Over Time

This trend chart highlights industry growth. Increasing release counts generally indicate expansion of anime production and audience demand.

Anime Releases by Season

Seasonal analysis identifies peak release windows. Spring and Fall often contribute a large share of annual anime launches.

Top 10 Highest Rated Anime

These titles represent the strongest audience reception after filtering for a meaningful number of votes, reducing the impact of small-sample bias.

Top 10 Most Popular Anime

Popularity is measured through member counts and reflects audience reach rather than quality. Popular titles often become industry-defining franchises.

Top Studios

The studio analysis highlights the most productive production houses and their contribution to the anime ecosystem.

Key Insights

- Anime production has expanded significantly over time.
- TV remains the dominant anime format.
- Popularity and rating do not always move together, creating opportunities to identify hidden gems.
- A small number of studios contribute a large share of anime production.
- Seasonal release patterns influence content availability and viewer engagement.

Power BI Dashboard Recommendations

KPIs: Total Anime, Average Score, Total Members, Total Favorites, Highest Score.

Charts: Anime Releases Over Time, Anime by Type, Anime by Status, Top Rated Anime, Top Popular Anime, Score vs Popularity.
